Education

University of British Columbia

Bachelor of Commerce, Major in Computer Science and Business

Sept 2023 – Present

(Graduating May 2027)

- **Coursework:** Programs, Problem Solving and Algorithms (A+), Computation Programs and Programming (A+), Data Structures and Algorithms (A-), Computer Systems (A-)

Experience

Software Engineer - Co-op

Insurance Corporation of British Columbia (ICBC)

North Vancouver, BC

April 2025 - Sept 2025

- Designed and implemented a scalable backend API using .NET (C#) and ReactJS to serve real-time vacation request data for internal applications
- Developed a vacation heatmap analytics tool used by 1,500+ employees, enabling data-driven insights into peak vacation trends and improving scheduling efficiency
- Delivered production-ready, cloud-integrated solutions following object-oriented design principles, data structure efficiency, and SDLC best practices
- Collaborated in Agile sprints for code reviews, debugging, and unit testing to ensure robust, maintainable code across distributed systems
- Led the migration of contact center data and services to Genesys Cloud (AWS infrastructure), improving system reliability, scalability, and performance monitoring

Data Engineer - Co-op

Insurance Corporation of British Columbia (ICBC)

North Vancouver, BC

Sept 2024 - April 2025

- Developed scalable data pipelines using Scala, SQL, and Apache Spark to enable high-performance data processing and analytics across large datasets.
- Optimized an existing data pipeline, reducing runtime by 17% by changing the data pipeline to create output in Parquet format instead of MapR
- Collaborated on ETL workflows for data ingestion and transformation, ensuring reliable integration of structured and semi-structured data sources

Teaching Assistant - Data Structures and Algorithms (Python)

University of British Columbia (UBC)

Vancouver, BC

Jan 2024 – May 2024

- Assisted in leading lab sections with 30+ students, providing guidance on Python concepts, data structures, and algorithmic thinking

Projects

Nudge (nwHacks 2025 LLM Runner-up) - January 2025 [GitHub](#) [🔗](#)

- Developed an AI-driven meeting productivity tool that enhances efficiency by analyzing real-time speech, detecting off-topic discussions, and providing actionable insights for improved collaboration
- Engineered a peer-to-peer meeting platform using WebRTC and Flask, enabling real-time audio streaming and analysis through WebSockets for seamless user experience
- Optimized backend processing pipelines to handle real-time audio streams and compute vectorized sentence similarity for accurate topic tracking.

Image Flooder (C++) - March 2024

- Engineered a versatile tool capable of processing images with custom color patterns, utilizing advanced algorithms to modify backgrounds and intricate details within user-uploaded graphics

Technologies / Interests

Languages: Python, C++, C, C#, Java, Scala, SQL, R, MATLAB, HTML, CSS, React JavaScript, TypeScript

Interests: Former Professional Smash Bros player, Running, Badminton, Swimming
